TITLE : VOICE SWITCH CIRCUIT

ABSTRACT : PURPOSE: To provide the voice switch circuit implementing the changeover in matching with the surrounding environment such as quantity of surrounding noise and an acoustic state of a room to be in use.

CONSTITUTION: An address signal corresponding to a signal from a variable resistor 104 is outputted from a decoder 105 to a ROM 106 by using the variable resistor 104 to set the operating characteristic of a voice switch circuit 100 while taking the effect of surrounding noise or the like into account. A parameter corresponding to the address signal is read from the ROM 106, a CPU 107 implements arithmetic operation processing based on the parameter to switch the state between the transmission and the reception state.
